

AI Demo Validation & Lead Quality System

Project Overview :

Currently, the presales team does cold calling from Airtable bases and Google Sheets to book demo classes. The main issue is that many parents/customers have already taken demo classes before, but the team does not get visibility during the calling process.

Some users repeatedly take free demos without serious purchase intent, which:

- reduces conversion rate,
- wastes teacher demo slots,
- lowers booking quality,
- and affects company revenue.

Proposed AI Solution

We want to build an AI system that can:

- Read Airtable and Google Sheets data
- Track previous demo history
- Detect duplicate/repeated demo requests
- Identify low-quality or repeated free-demo seekers
- Alert the presales team before booking

- Send a professional reminder to the parent/customer

The goal is to improve booking quality and increase conversion rates.

How the System Will Work

Step 1

Pre-sales team receives or enters a lead.

Step 2

AI checks:

- Phone number
- Parent name
- Student name
- Email
- Previous demo history

Step 3

If a previous demo is found, AI shows:

- Demo date
- Teacher name
- Pricing discussed earlier
- Number of demos already taken

Step 4

AI sends:

- Internal alert to sales team
- Professional message to parent

Parent Notification Example

Hello Sir/Ma'am,

We noticed that you had previously attended a demo session with us on [Date] with [Teacher Name].

Earlier, the discussed package was [Pricing Details].

We would be happy to continue helping your child with the next steps.

Main Features

- Duplicate demo detection
- AI lead quality scoring
- Demo history tracking
- Sales team alerts
- Parent communication automation
- Airtable & Google Sheets integration
- Dashboard for monitoring

AI Lead Scoring

Score	Meaning
Below 50	Repeated/free-demo seeker
80–100	High-quality lead
50–79	Moderate lead

Business Benefits

- Better quality bookings
- Higher conversion rate
- Reduced fake/free demo bookings
- Improves employee efficiency
- Better revenue generation
- Smart lead filtering
- Improve parents experience
- Reduce operational costs
- Better customer retention
- Makes data management easier
- Increases admission

Final Goal

- To create an AI-powered presales system that helps the company identify quality customers, reduce repeated free demos, improve conversions, and increase revenue through intelligent lead verification and automation.
